# DISINFECT & STAY PROTECTED IN THE NEW NORMAL

The current COVID-19 pandemic has taught the world one thing – never take cleanliness lightly. And in this new era of unpredictable health hazards, cleanliness alone may not be enough.

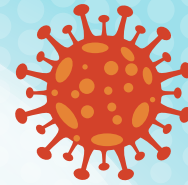

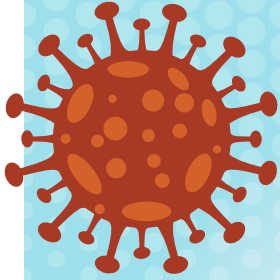

“  
TO STAY ONE STEP AHEAD OF THE VIRUS,  
DISINFECTION IS KEY.  
”

We at Kemasjernih have been actively supporting our business partners from the essential services industries in keeping their premises decontaminated and virus-free throughout the MCO period.

As Malaysia gradually reopens after MCO, our exposure increases once again. Whether it is a home, office, mall, factory or any venue at all, the virus does not discriminate, and it is more critical now than ever to disinfect and stay protected.

# WHY DISINFECT WITH US?

1

**PREVENTION IS BETTER THAN CURE** has always been our motto in delivering our disinfecting services to all our clients especially in hospital and education industries for the past 20 years.

2

Regular cleaning followed by disinfection is the best practice to **prevent the spread of coronavirus** and other viral threats which can **persist in air for hours and on surfaces for up to several days.**

3

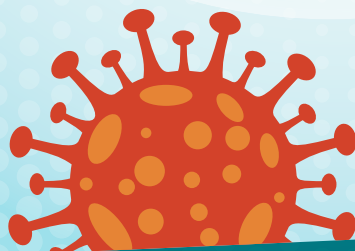

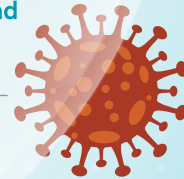

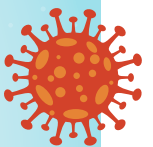

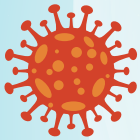

Disinfection is a specialised task and can only **be carried out safely and effectively** by trained professionals with specialised tools and equipment.

4

Not all disinfectants work equally against coronavirus and most just provide temporary protection. Our specialised disinfection treatment **provides maximum coverage and long-lasting effectiveness.**

5

Our disinfectants are approved by the U.S. EPA and Singapore NEA, which are **safe to use for homes and commercial areas** alike.

EPA: Environmental Protection Agency;  
NEA: National Environment Agency.

UNITED STATES  
EPA APPROVED

SINGAPORE NEA  
APPROVED

HALAL CERTIFIED

## SUITABLE FOR:

Residential

Offices

Retail and F&B Shop Lots

Shopping Malls

Factories and Warehouses

Hospitals

Schools and Kindergartens

# DISINFECTING PROCEDURES

## PHASE 1

### Touch Points Disinfecting

- Wiping of all accessible and frequently touched surfaces using cleaning cloths and disinfectant
- Disinfectant Ingredient: Sodium Dichloroisocyanurate/Sodium Hypochlorite

## PHASE 2

### Fogging/Misting

- Thorough fogging/misting treatment using specialised machinery to eliminate microbial contamination from the air and surfaces, including hard-to-reach areas
- Disinfectant Ingredient: Quaternary Ammonium Compound

OFFERING THE HIGHEST QUALITY DISINFECTING SERVICES AT AN AFFORDABLE RATE

TALK TO US TODAY  012-310 1138

FOR A LONGER TERM VIRUS-FREE PROTECTION, WE ALSO PROVIDE:

### Antimicrobial Coating

Application of advanced antimicrobial protective coating on high-touch surfaces that neutralises microbes whenever they come in contact with the treated surfaces

#### HIGH RESIDUAL EFFICACY:

Longer lasting protection against viruses of **up to 1 week** even with frequent touches, reducing the risk of indirect transmission

## EQUIPMENT USED

Mist Machine

Fog Machine

Personal Protective Equipment (PPE)

Protective head covers, goggles or face shields, surgical masks, disposable gowns, gloves and shoe covers

# HOW IS IT DONE?

1

Customers must ensure that **all ventilation systems, electrical components and smoke detectors are switched off and covered up** if possible.

2

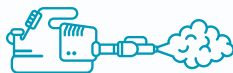

The area of treatment must be **completely evacuated and enclosed**.

3

Our team of trained personnel with full PPE will begin the **first phase of disinfecting process** by cleaning and wiping down all accessible high-touch surfaces.

4

We will next move on to the **second phase** which uses the **misting/fogging machine to dispense** the disinfectant **thoroughly to the entire area**.

5

The final step is to **seal the treated area for at least two hours before re-entry** is allowed.

## DISINFECT TODAY TO KEEP YOU & YOUR LOVED ONES SAFE & SECURED!
